# Content Overview

- What is GraphQL?
- Who is using GraphQL?
- REST vs GraphQL
- Starting with GraphQL
- Creating a GraphQL API
- Consuming a GraphQL API

# Where is the code?

<https://bit.ly/RoccoGraphQL>

Was created by  
Facebook in 2012

Open-sourced in  
2015.

Is a query language  
for your API.

Provides flexibility and  
efficiency in client-server  
communications.

Huge community  
involvement

# REST: Get Companies

/api/companies

{JSON}

Web API

```
[  
  {  
    "id": "c9d4c053-49b6-410c-bc78-2d54a9991870",  
    "name": "IT_Solutions Ltd",  
    "address": "583 Wall Dr. Gwynn Oak, MD 21207",  
    "country": "USA"  
  },  
  ...  
]
```

# REST: Get Employees

/api/companies/<id>/employees

{JSON}

Web API

```
[
  {
    "id": "80abbca8-664d-4b20-b5de-024705497d4a",
    "name": "Sam Raiden",
    "position": "Software developer",
    "age": 26
  },
  ...
]
```

# GraphQL

```
{  
  companies {  
    name  
    employees {  
      name  
    }  
  }  
}
```

{ Query }

{JSON}

```
[  
  {  
    "name": "IT_Solutions Ltd",  
    "employees": [ { "name": "Sam Raiden" },  
      ...  
    ]  
  }  
  ...  
]
```

GraphQL Server

# REST vs GraphQL

## REST

Multiple round trips

Over fetching / under fetching data

Frontend teams rely heavily on backend

Caching is built into HTTP spec

Large community

Learning curve: Moderate

## GraphQL

One single request to collect the data

You get only what you ask for

Frontend and backend teams can work independently

Requires additional libraries (Apollo)

Growing community

Learning curve: Difficult

# GraphQL: Core Concepts

Fields

Types

Queries

Schemas

Mutations

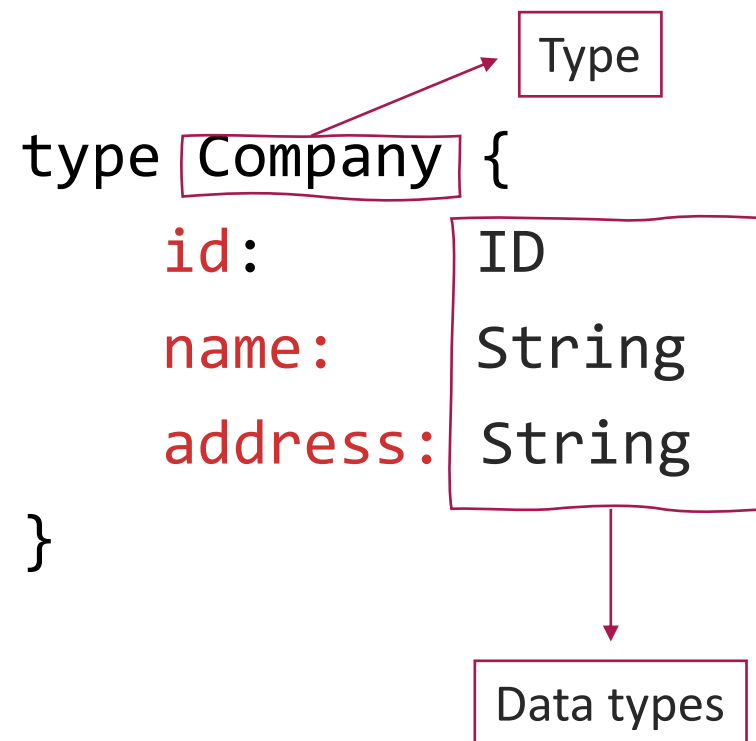

# GraphQL: Fields

# GraphQL: Types

# GraphQL: Schema

# GraphQL: Query

```
schema {  
  query: CompanyQuery  
  mutation: CompanyMutation  
}
```

```
type CompanyQuery {  
  companies: [Company]  
  company(id: ID!): Company  
}
```

# GraphQL: Mutations

```
type CompanyMutation {  
  createCompany(company: companyInput!): Company  
}
```

# GraphQL SDK for .NET

## Popular Libraries

Demo: GraphQL + Playground + .NET 6

# Summary

- A GraphQL API uses queries.
- Returns specified data structure.
- Provides flexibility and efficiency in client-server communications.
- Schemas help to define what can be queried.
- Playground is a client for a GraphQL
